

Clearing cache for iPhone Firefox

Step 1: Open Firefox.

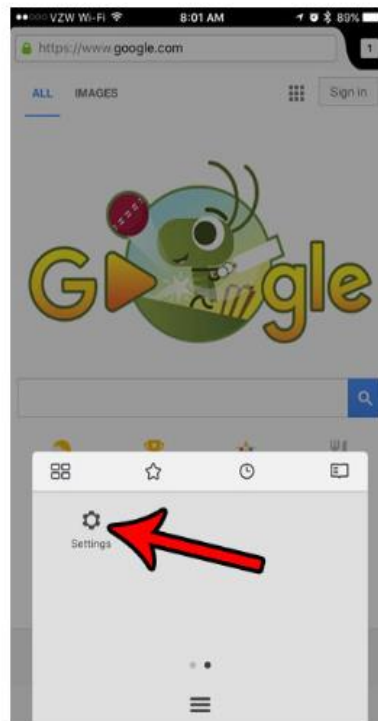

Step 2: Tap the **Menu** icon at the bottom of the screen. It's the "hamburger" button that has three horizontal lines.

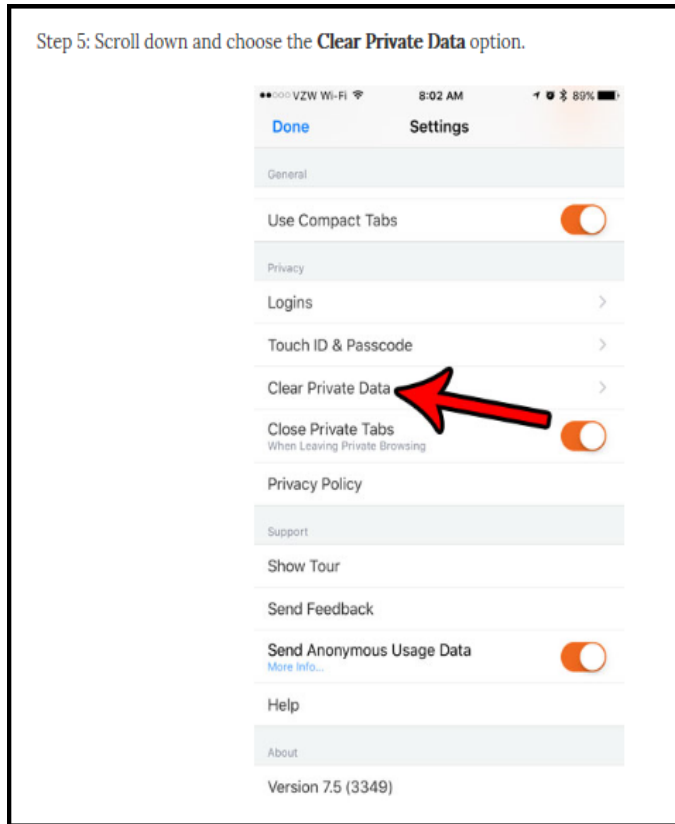

Step 3: Swipe to the left on the first pop-up menu.

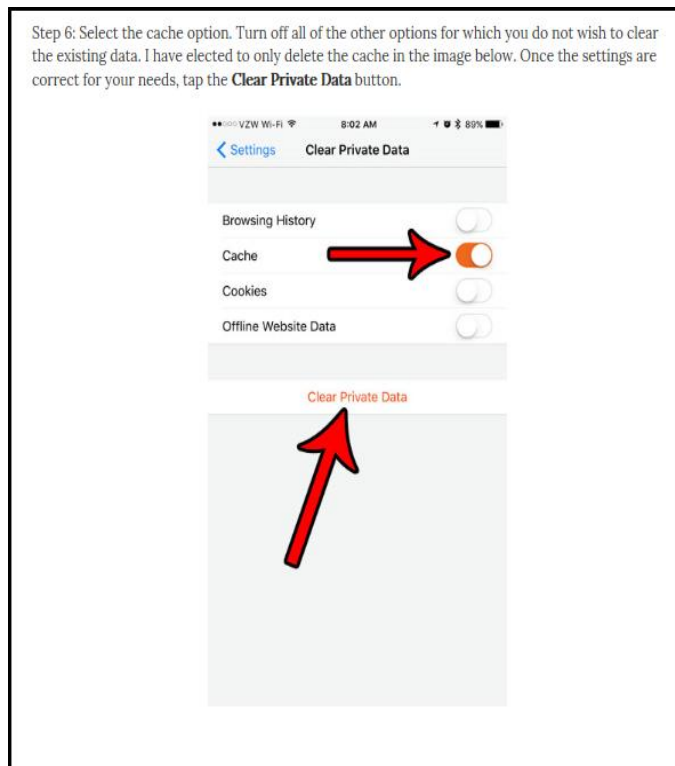

Step 4: Select the **Settings** option.

Step 5: Scroll down and choose the **Clear Private Data** option.

Step 6: Select the cache option. Turn off all of the other options for which you do not wish to clear the existing data. I have elected to only delete the cache in the image below. Once the settings are correct for your needs, tap the **Clear Private Data** button.

Step 7: Touch the **OK** button to confirm that you understand this data cannot be recovered once you complete this process.
